Q.1. Vegetable  
→ " Rooftop farming is more common in urban ~~are~~ areas of our country" because the urban areas of our country donot have too much space which are left for farming. The people living in the urban areas of our country are donot have too much unused spaces in their home except the terrace or roof. So, they use the roof for doing small or big ~~far~~ farming. The people living in the village area have a little space for cows, etc. in front of or backside of their house. so, the people living in village donot think of rooftop gardening. But, as we know, the cities or urban areas do not have space left for animals instead they do the gardening in their roofs. For e.g: If A lives in villages and A has a big ground like area near home.

So, A does farming on the big-ground ~~near~~ in A's home. But, opposite of A, B lives in an urban area. B doesnot have a big ground like area near his home but B has a big home so and a big terrace. So, B does Roof top gardening due to which the unused space in his terrace is filled with many vegetables. Next example, Ram Sharma is a very polite man living in the urban city Kathmandu. He wanted to do farming but he could not go to village. But, One day, he got an idea of Rooftop gardening. He planted many vegetables in his unused terrace and now he sells those vegetables and fruits. And, he says, "rooftop gardening is a very good idea for people living in cities of our country."

Q.2.

→ Intercropping farming is the cultivation of two or more crops together on the same field. It is a very important practice in the farming community. It is very advantageous. Some of its advantages are:

- It helps to reduce the diseases of plants as the distance between plants of same species is increased because other crops are planted in between.
- It attracts beneficial insects like bees which help

the crops.

- It utilizes the farm area more efficiently.
- It reduces the erosion of topsoils.
- It provides two or more different food crops for the farmer in one cropping season.

Q.3

- Organic Manure is the ~~organic material like plant and animal waste~~
- Organic manure is the plant or animal waste which plays a very important role in growing healthy vegetables.
- Some types of Organic Manure are:

① CoverCrop manure: It is a type of organic manure.

In this manure, there are things called cover crop which have to be grown and added to a pile of compost which can be later used in garden or 1 months before cultivation in fields.

② Mineral Manure: It is a process manure in which the minerals are kept in the soils which gradually breaks after years and then it can be ready for keeping in the garden for good vegetables. Some of the minerals for making manure are: gypsum, hard-rock phosphate, etc.

Q4

→ World Trade Organization (WTO) is the only global international organization which deals with the rules of trade between nations. Its motto is to promote trade. Some of its objectives are:

- Trade without discrimination.
- To settle the trade disputes.
- To set and enforce rules for international trade.
- To increase the transparency of decision making process.
- To help the developing countries benefit fully from the global trading system.
