

EXERCISE 2(II)

1. Find the perpendicular, base and the hypotenuse of the following right angled triangles with reference to the angle θ

2. Find all the trigonometrical ratios of an angle from the following right angled triangle with reference to the angle θ .

→ Soln Here,
From the given figure,

$$h = AC$$

$$p = AB$$

$$b = BC$$

Now,

$$\sin \theta = \frac{p}{h} = \frac{AB}{AC}$$

$$\operatorname{cosec} \theta = \frac{h}{p} = \frac{AC}{AB}$$

$$\cos \theta = \frac{b}{h} = \frac{BC}{AC}$$

$$\sec \theta = \frac{h}{b} = \frac{AC}{BC}$$

$$\tan \theta = \frac{p}{b} = \frac{AB}{BC}$$

$$\cot \theta = \frac{b}{p} = \frac{BC}{AB}$$

(ii)

→ Soln Here,

From the given figure,

$$h = \cancel{MO} OM$$

$$p = MN$$

$$b = ON$$

$$\text{Now, } \sin \theta = \frac{p}{h} = \frac{MN}{OM}$$

$$\cos \theta = \frac{b}{h} = \frac{ON}{OM}$$

$$\tan \theta = \frac{p}{b} = \frac{MN}{ON}$$

$$\operatorname{cosec} \theta = \frac{h}{p} = \frac{OM}{MN}$$

$$\sec \theta = \frac{h}{b} = \frac{OM}{ON}$$

$$\cot \theta = \frac{b}{p} = \frac{ON}{MN}$$

(iii)

→ Sol: Here,

From the given figure,

$$h = QR$$

$$p = PQ$$

$$b = PR$$

$$\text{Now, } \sin \theta = \frac{p}{h} = \frac{PQ}{QR}$$

$$\operatorname{cosec} \theta = \frac{h}{p} = \frac{QR}{PQ}$$

$$\cos \theta = \frac{b}{h} = \frac{PR}{QR}$$

$$\sec \theta = \frac{h}{p} = \frac{QR}{PR}$$

$$\tan \theta = \frac{p}{b} = \frac{PQ}{PR} \quad / \quad \cot \theta = \frac{b}{p} = \frac{PR}{PQ}$$

(iv)

→ Soln Here,
From the given figure,

$$h = YZ$$

$$b = \cancel{YZ} XZ$$

$$p = XY$$

$$\text{Now, } \sin \theta = \frac{p}{h} = \frac{XY}{YZ} \quad / \quad \operatorname{cosec} \theta = \frac{h}{p} = \frac{YZ}{XY}$$

$$\cos \theta = \frac{b}{h} = \frac{XZ}{YZ} \quad / \quad \sec \theta = \frac{h}{b} = \frac{YZ}{XZ}$$

$$\tan \theta = \frac{p}{b} = \frac{XY}{XZ} \quad / \quad \cot \theta = \frac{b}{p} = \frac{XZ}{XY}$$

(v)

→ Soln Here,

From the given figure,

$$h = DF$$

$$b = DE$$

$$p = EF$$

Now,

trios of
angle

DATE _____

PAGE No. _____

$$\sin \theta = \frac{p}{h} = \frac{EF}{DF} \quad / \quad \operatorname{cosec} \theta = \frac{h}{p} = \frac{DF}{EF}$$

$$\cos \theta = \frac{b}{h} = \frac{DE}{DF} \quad / \quad \sec \theta = \frac{h}{b} = \frac{DF}{DE}$$

$$\tan \theta = \frac{p}{b} = \frac{EF}{DE} \quad / \quad \cot \theta = \frac{b}{p} = \frac{DE}{EF}$$
